

REDWOOD

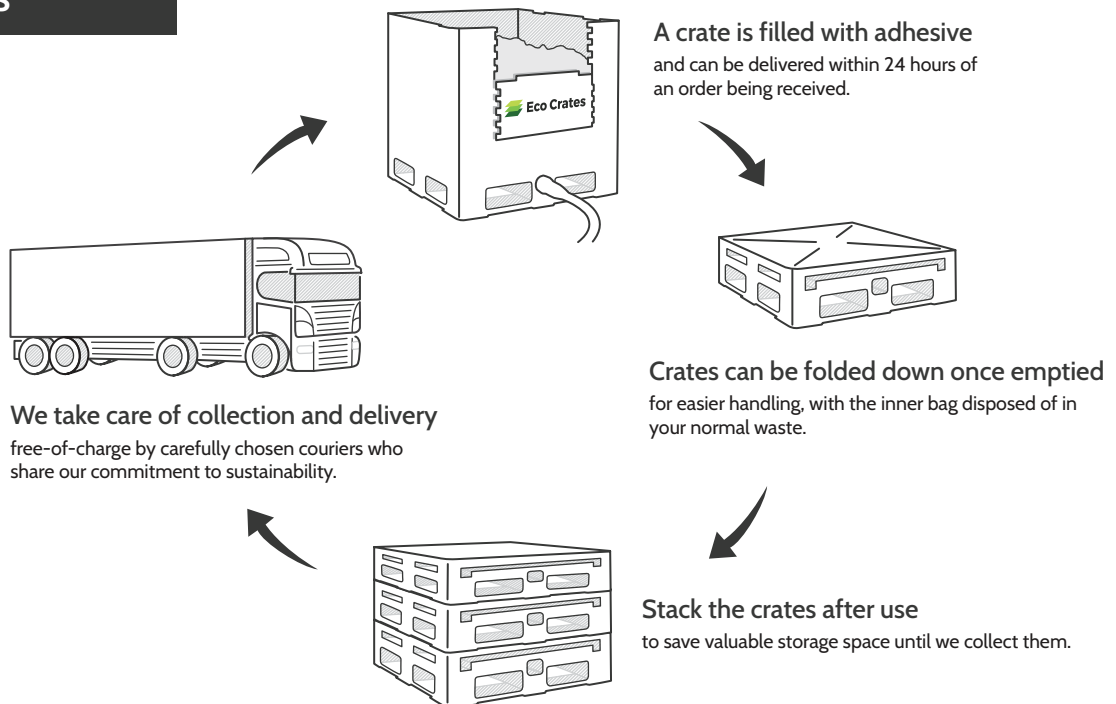

Sustainable bulk adhesive solutions

Specialists in supplying wood finishes, adhesives and abrasives

We are dedicated to providing high quality, performance and products – but not at the expense of the environment. With this commitment in mind, we have developed fully reusable Eco Crates, which are the eco-friendly alternative to traditional IBCs for PVA adhesives and are better for the environment than single-use alternatives.

How it works

Why use Eco Crates

Environmentally friendly:

The only waste produced is the inner liner bag that holds the glue, the crate is fully reusable.

Space utilisation:

The used crates fold down to a quarter of their filled size, and are then stackable, saving valuable storage space.

Economic:

A much higher yield of adhesive is achieved from the crates in comparison to IBCs; which have to be drained out.

Reusable:

The used crates are collected free of charge after use, and so prove to be a much more cost effective, environmentally friendly option in comparison to single use alternatives.

To find out how your business could benefit from using Eco Crates, get in touch
